

Project Feedback

Assessment: Final Report

Project: Mapless Navigation with Deep Reinforcement Learning

Student: Minghong Xu (201601082)

Assessor: Jason Ralph

Grade : 81 (Penalty: 5)

Assessor's Marking:

Knowledge and Understanding: 22

Intellectual and technical skills: 25

Exposition and Structure of the thesis: 34

Feedback and comments on the thesis:

A nicely presented report with good use of graphics. The student provides a clear statement of the project objectives and a nice description of the aims and the approach to the project work. The written sections of the project were relatively short but otherwise well written, and very well referenced. The student clearly made good use of existing software tools and provided bespoke software to solve the problem addressed in the project - it is a shame that the software was not added in an appendix, although some code snippets were provided and the full code is available via a weblink. Overall, the report described a very good project but it lacks a little detail that would have obtained a higher mark.
