

Project Feedback

Assessment: Specification Report

Project: Student specified project on neural computation

Student: Minghong Xu (201601082)

Assessor: Jason Ralph

Grade : 60

Marks and Feedback:

Knowledge and Understanding: 24

Project Planning: 24

Report Structure: 12

Guidance for improvements:

The report is well written but the student has focussed too much on explaining the deep learning rather than the project. In particular, it is not clear to me how the robot is to sense the environment or how the sensor (which ever it is selected to be) data will be encoded to train the neural networks? There should be far more references, even at this stage of the project.

Required for progression:

The project is suitable for a BEng/MEng accredited degree project: Yes
